**FOR IMMEDIATE RELEASE**

**NORAM DRILLS ONE OF THICKEST CLAYSTONE INTERSECTIONS TO DATE IN PREVIOUSLY UNDRILLED AREA**

Vancouver, British Columbia – November 17, 2020 – Noram Ventures Inc. (“Noram”) (TSX - Venture: NRM / Frankfurt: N7R / OTCQB: NRVTF) is pleased to announce the completion of Hole #1 (CVZ-61) at a depth of approximately 417ft (127m) and with an intersection of approximately 297ft (91m). CVZ-61 was drilled on the southeast side of the northeast-trending fault in a previously unexplored area. At this point it is unclear whether the SE side of the fault has been raised or lowered in relation to the NW side. “Noram specifically designed this program to sizably expand the area of exploration and better delineate the resource area. The Company will use these data for feasibility studies in the near future,” stated President and CEO, Dr. C. Tucker Barrie.

Image 1 – a portion of the over 297ft of lithium-hosted clays from CVZ-61. Greenish-blue clays typically indicating higher levels of lithium.

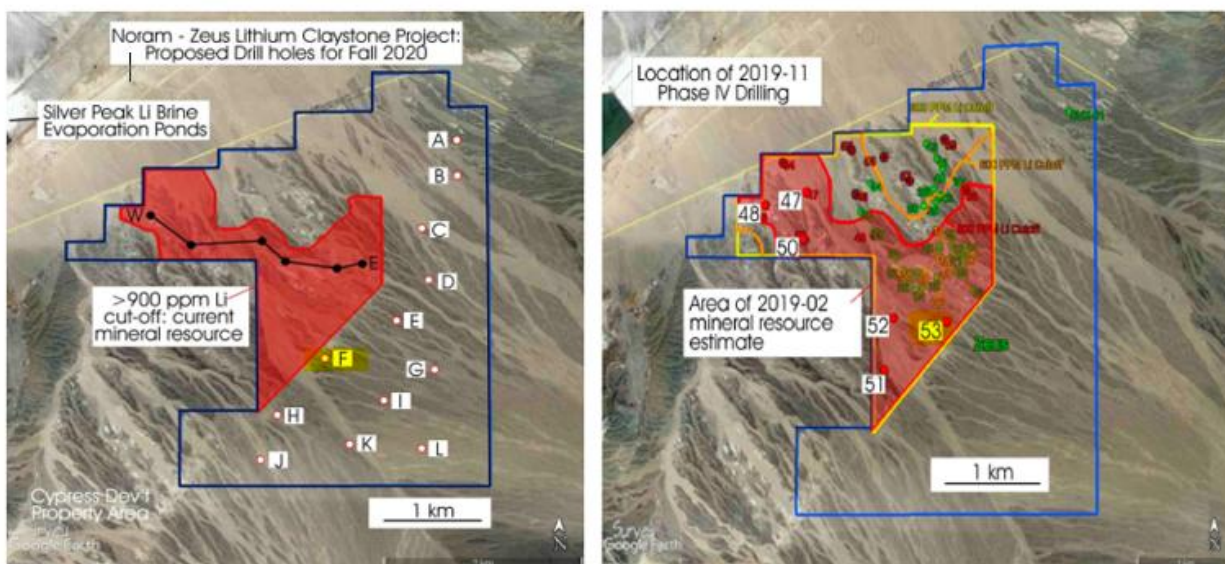

Figure 1 – Phase V Drill Program (shown left) and CVZ-61/Hole #1 highlighted in yellow (F) in previously undrilled area of the Zeus Property. CVZ-61 intersected one of the thickest sections of claystone to date. Phase IV Drill Program (shown right) and the most proximal hole to CVZ-61 highlighted in yellow (CVZ-53) for reference.

The diagram above compares drill hole CVZ-61 to nearby drill hole CVZ-53 which is located ~350 meters to the north. A histogram of the lithium grades (shown in ppm) is illustrated in dark blue for CVZ-53 to the right of the stratigraphic column. Assays are not yet available for CVZ-61 but are to be processed on a “rush” basis at ALS Laboratories in Reno, Nevada. The layers in the diagram shown in blue, light green and purple are the beds of claystone which have been shown in past drill holes to contain high lithium grades.

“I am very pleased with the results of core hole CVZ-61. It was drilled in an area with no previous drilling data and intersected one of the thickest sections of claystone seen in Noram’s drilling to date. This hole bodes well for the remaining holes in this Phase V drilling program in which all holes are expected to add significantly to the property’s lithium resource”, states Brad Peek, consulting geologist and Qualified Person for this and all 4 of the previous drilling phases of Noram’s Zeus lithium property.

The technical information contained in this news release has been reviewed and approved by Brad Peek., M.Sc., P. Geo., who is a Qualified Person with respect to Noram’s Clayton Valley Lithium Project as defined under National Instrument 43-101.

**About Noram Ventures Inc.**

Noram Ventures Inc. (TSX - Venture: NRM / Frankfurt: N7R / OTCQB: NRVTF) is a Canadian based junior exploration company, with a goal of developing lithium deposits and becoming a low - cost supplier. The Company’s primary business focus since formation has been the exploration of mineral projects. Noram’s long term strategy is to build a multi-national lithium minerals company to produce and sell lithium into the markets of Europe, North America and Asia.
